Project Title	FETAL AI: USING MACHINE LEARNING TO PREDICT AND MONITOR FETAL HEALTH
Maximum Marks	4 Marks

Initial Model Training Code, Model Validation and Evaluation Report

In The initial model training for Fetal AI involved using a dataset of fetal health indicators to train a machine learning model, optimizing parameters to maximize accuracy and predictive power. Validation was conducted using a holdout dataset to assess the model's generalizability, while evaluation metrics such as precision, recall, and F1-score were calculated to ensure robust performance. This approach ensures the model effectively identifies critical fetal health patterns, supporting timely and accurate clinical decision-making.

Initial Model Training Code:

```
#Random forest model
from sklearn.ensemble import RandomForestClassifier
RF_model = RandomForestClassifier()
RF_model.fit(X_train_smote,y_train_smote)
predictions = RF_model.predict(X_test)
print(accuracy_score(y_test, predictions))
```

```
0.95141065830721
```

```
from sklearn.metrics import confusion_matrix
from sklearn.metrics import ConfusionMatrixDisplay
import matplotlib.pyplot as plt
```

Empty markdown cell, double-click or press enter to edit.

```
size = X_train_smote.shape[0];
print("For the amounts of training data is:",size)
print("accuracy of the RandomForestClassifier:",RF_model.score(X_test,y_test))
cm = confusion_matrix(y_test, predictions)
cm_display = ConfusionMatrixDisplay(cm).plot()
plt.show()
```

Model Validation and Evaluation Report:

Model	Classification Report	Accuracy	Confusion Matrix
Random Forest Regressor	<pre>#Random forest model from sklearn.ensemble import RandomForestClassifier RF_model = RandomForestClassifier() RF_model.fit(X_train_smote,y_train_smote) predictions = RF_model.predict(X_test) print(accuracy_score(y_test, predictions))</pre> <p>0.95141065830721</p> <pre>from sklearn.metrics import confusion_matrix from sklearn.metrics import ConfusionMatrixDisplay import matplotlib.pyplot as plt</pre> <p>Empty markdown cell, double-click or press enter to edit.</p> <pre>size = X_train_smote.shape[0]; print("For the amounts of training data is:",size) print("accuracy of the RandomForestClassifier:",RF_model.score(X_test,y_test)) cm = confusion_matrix(y_test, predictions) cm_display = ConfusionMatrixDisplay(cm).plot() plt.show()</pre>	95%	-
